TÓM TẮT

I am a Frontend Developer with over 5 years of experience, including more than 3 years working extensively with Vue.js. Currently, I focus on building applications using SAPUI5 and TypeScript, with a strong emphasis on handling application logic and structuring code in TypeScript rather than relying heavily on HTML/XML. I prioritize writing clean, maintainable code, optimizing performance, and delivering a solid user experience. I am also continuously learning to expand my skills toward fullstack development.

KỸ NĂNG

- Kỹ năng: Vuejs, Javascript, Typescript, Gitlab, Github, Nuxtjs, Pinia, Reactjs, Nodejs, MySQL, MongoDB, Sourcetree, Postmain, Bootstrap, Tailwindcss, HTML/SCSS, SAPUI5

KINH NGHIỆM LÀM VIỆC

Frontend Developer (SAPUI5 / TypeScript) — Laidon Group

12/2024 – Hiện tại

- Architected a shared OData Service Layer in TypeScript reused across multiple SAPUI5 views — new pages plug into the shared service instead of re-implementing API calls and data processing.
- Delivered new SAPUI5 / Fiori pages with XML Views and Fragments for the Partner Portal and data management modules, structured as Service / Formatter / Builder layers, enabling suppliers to manage profiles and submit change requests for approval.
- Resolved page-navigation performance bottlenecks by adding cleanup logic in routing lifecycle hooks, eliminating lag and leftover state when switching between views.
- Implemented client-side data transformation and payload validation before OData submission, refactored the related legacy modules incrementally and covered the business logic with Jest unit tests.
- Onboarded new developers to SAPUI5 and the project codebase, after ramping up on SAPUI5 myself within a one-week onboarding using the official documentation.
- Collaborated in Agile/Scrum sprints — task estimation and sprint planning in Jira — and partnered with Node.js backend developers, BAs and BMs to align API contracts and adapt the UI quickly to API changes.

Nghỉ việc tạm thời — Phát triển chuyên môn

05/2024 – 11/2024

Self-directed learning while job searching: React (Hooks, functional components), advanced TypeScript, JavaScript fundamentals and software design patterns.

Frontend Developer (Vue.js / TypeScript) — JOBTES

12/2021 – 05/2024

- Built a reusable Vue.js component library shared across HR, timekeeping, payroll and recruitment modules, removing duplicated UI code, standardizing UX across screens and iterating on UI/UX from internal user feedback.
- Proposed and led the incremental JavaScript → TypeScript migration, catching type errors at compile time instead of in production.
- Developed real-time timekeeping data synchronization over RESTful APIs feeding the payroll module, keeping attendance data current for accurate payroll calculation.
- Optimized data-heavy tables with virtual scrolling, lazy loading and code splitting, making large datasets render and scroll smoothly where screens previously lagged.
- Contributed to the Vue 2 → Vue 3 upgrade (Composition API, Pinia).
- Conducted code reviews and onboarded new members as the frontend team scaled from 3 to 8 engineers in an Agile/Scrum setup.

Công nghệ: html, css3

Nghỉ việc tạm thời — Phát triển chuyên môn

08/2020 – 01/2022

Self-directed learning while job searching during the COVID-19 pandemic: advanced JavaScript and Vue.js.

Earlier Experience — Frontend (HTML/CSS) — FASTCODING · VIETRY · ZAGO

11/2014 – 07/2020

Built responsive, mobile-first websites and e-commerce pages from design mockups, including outsourced projects for Japanese clients; mentored 3 junior developers.

DỰ ÁN

AiHR – Human Resource Management System — Frontend Developer

12/2021 – 12/2023

- **Description:** A web-based HR management system with modules for department management, employees, timekeeping, payroll, and recruitment. Started with a team of 3, later growing to 8.
- **Technologies:** Vue.js 2 & 3, TypeScript, Pinia, MongoDB, Laravel, GitLab, Jest, Cypress, Webpack

Công nghệ: Vue3, Pinia, Laravel, Mongo, Gitlab

SimpleMDG — Frontend Development

12/2024 – Hiện tại

Description: A Master Data Governance platform that helps enterprises manage and standardize data across SAP systems. Contributed to data management modules and the Partner Portal, which allows suppliers to proactively manage their partner profiles and send requests to the client for review and approval.

Technologies: SAPUI5, TypeScript, JavaScript, OData, JSONModel, HTML, CSS, Git

Công nghệ: SAPUI5, Typescript
